

### THE PROBLEM

The hundreds of EHR, PM, Billing, and EMPI products available today fill the healthcare industry with different technology architectures, service models, and capabilities. This disparate HIT environment makes it difficult and expensive to share information between systems critical to providing quality patient care.

### OUR SOLUTION

Connect™ empowers healthcare providers to manage thousands of bi-directional interfaces between various HIT products and locations through a single platform. By leveraging the power of a gateway model and open API, Connect™ opens the door to true interoperability and enhanced operational efficiency.

BEFORE

AFTER

### THE FACTS

According to the AHA, a typical hospital spends an avg. of \$10-20K on each interface and between \$25-75k maintaining them in their system.

Connect™ solves the problem of interoperability while also eliminating this high maintenance cost.

Interoperability requirements in the HITECH Act and Meaningful Use will be mandatory in 2018. A traditional approach to interfacing may face high non-compliance fines.

Connect™ ensures compliance with an open API model for seamless data sharing.

Reduce costs, improve patient care, and ensure compliance in an evolving regulatory landscape all with a single, affordable solution.
